### 目錄/Contents

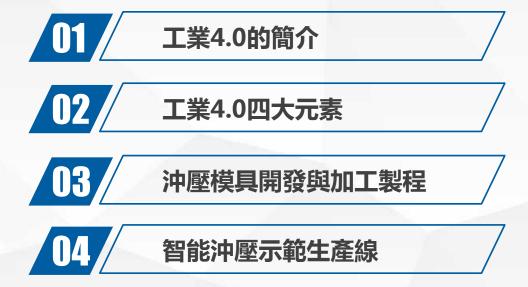

□ □

在產品的生命週期,係將相關事件(人、事、物和系統),透過即時且透明的資訊網路,來創 造動態、自組織和優化,產生跨公司增值。

" The term Industry 4.0 stands for the fourth industrial revolution. " Best understood as a new level of organization and control over the entire value chain of the life cycle of products, it is geared towards increasingly individualized customer requirements. (...) The basis for the fourth industrial revolution is the availability of all relevant information in real time by connecting all instances involved in the value chain. The ability to drive the optimal value-added flow at any time from the data is also vital. The connection of people, things and systems creates dynamic, self organizing, real-time optimized value-added connections and across companies. (...)". (摘自阿亨工業大學工業4.0講義)

#### >>> 智慧(Intelligence)與智能(smart)

智慧源自拉丁字intelligentia,意思是"認識,辨別力"。(Intelligence has derived from Latin intelligentia which means "understanding, power of discerning.)

智能是來自古英語smeortan,類似於"快速,積極,聰明"。 (Smart is from Old English smeortan that is similar to "quick, active, clever.)

智能是關於想法的應用,思考一個切實可行解決日常生活的問題。(Smart specifically is about application of ideas, thinking in a practical way to solve problems in day to day life.)

智慧可能指的是理解能力,而智能才是實際應用智慧的技能。(Intelligent may refer to the capacity of understanding while smart is about the skill of applying intelligence practically.)
